

Our Story

WorldWide Interpreters, **In Business Since 1998**,
provides **Professional, On-Demand Language Interpretation**
across the U.S. to **Every Sector of Business, Government and Medicine**.

The founder, a former NASA engineer, responded to requests from hospital staff for an easier to use device for language interpretation with the development of the **INTERPRETER IN A BOX™**.

The critical nature of medical care demands that it be delivered **Quickly, Competently and At The Point of Need**, yet there are glaring inadequacies in most approaches to this problem when the patient does not speak English. For example, on-staff language interpreters cannot be in two places at once and each will have a limited number of languages that they are fluent in. The use of family members or other non-professional interpreters, such as housekeeping staff, does not assure interpretation accuracy and may be illegal. Other telephone based interpretation systems require that the patient be moved to the device, that the caregiver remembers and enters correctly a complicated set of phone numbers and PIN codes, and that both patient and caregiver hold a telephone handset to their ear.

In contrast, WorldWide Interpreter's proprietary **INTERPRETER IN A BOX™** is the only system for language interpretation that combines the following essential features:

- 1) It is wireless and can easily be **Taken to the Patient**;
- 2) It can be operated **Hands-Free** as a speakerphone;
- 3) It has a **One-Button Quick Connection** to the language interpreter call center, so there is no phone number or PIN to remember; and,
- 4) It is **Single-Purpose** connecting only to the interpreter call center and, therefore, will not be abused for personal calls or stolen.

This means of providing on-demand access to WorldWide Interpreters staff of professional, medically trained interpreters assures that the medical care is not impeded. The **INTERPRETER IN A BOX™** is the most efficient and practical system available to **Comply with Title VI Regulations** for providing equal access to Limited English Proficient persons.

It is available in either 2.4 GHz or 5.8 GHz Digital Spread Spectrum frequency hopping technology for enhanced security, clarity and range and there is both a single and dual-handset model.

Patient care proceeds

Where Needed

When Needed

How Needed

In **Over 100 languages**,

Available anytime of day or night **24 x 7 x 365**,

At **One Low Fixed Rate**, regardless of language or time of day,
